No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1988 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 78

NUMBER 1, SEPTEMBER 1988

G. LONSDALE, J. S. BRAMLEY, AND D. M. SLOAN. A Nonlinear Multigrid Algorithm and Boundary-Fitted Coordinates for the Solution of a Two-Dimensional Flow in a Branching Channel	1
B. J. ARCHER AND G. A. PARKER. A Cross Section Code for Diatom-Spherical Particle Inelastic Scattering	15
RANDALL J. LEVEQUE. High Resolution Finite Volume Methods on Arbitrary Grids via Wave Propagation	36
JOHN C. STRIKWERDA AND YVONNE M. NAGEL. A Numerical Method for the Incompressible Navier-Stokes Equations in Three-Dimensional Cylindrical Geometry	64
L. N. EPELE, H. FANCHIOTTI, C. A. GARCÍA CANAL, AND S. J. SCIUTTO. Improvement of the Monte Carlo Projector Method for Spin Systems	79
LARS FERM. Open Boundary Conditions for Stationary Inviscid Flow Problems	94
BRUCE D. SCOTT. An Implicit Simulation of Drift-Wave Turbulence in a Sheared Magnetic Field	114
D. CATHERALL. The Optimisation of Approximate-Factorisation Schemes for Solving Elliptic Partial Differential Equations in Three Dimensions, Featuring a New Two-Factor Scheme	138
JAMES J. GOTTLIEB. Staggered and Nonstaggered Grids with Variable Node Spacing and Local Time Stepping for the Random Choice Method	160
MAHESH S. GREYWALL. Streamwise Computation of Three-Dimensional Incompressible Potential Flows	178
ALEXANDER EYDELAND AND BRUCE TURKINGTON. A Computational Method of Solving Free-Boundary Problems in Vortex Dynamics	194
K.-H. HOFFMANN, J. SPREKELS, AND A. VISINTIN. Identification of Hysteresis Loops	215
PAUL PAPATZACOS AND SVEN-ÅKE GUSTAFSON. Incompressible Flow in Porous Media with Two Moving Boundaries	231
ANNOUNCEMENTS	249
LIST OF FORTHCOMING ARTICLES	250

NUMBER 2, OCTOBER 1988

NIELS F. OTANI. The Alfvén Ion-Cyclotron Instability: Simulation Theory and Techniques	251
C. CHICCOLI, S. LORENZUTTA, AND G. MAINO. On the Evaluation of Generalized Exponential Integrals $E_\nu(x)$	278

D. EYRE, C. J. WRIGHT, AND G. REUTER. Spline-Collocation with Adaptive Mesh Grading for Solving the Stochastic Collection Equation	288
ARNE J. PEARLSTEIN AND DIMITRIOS A. GOUSSIS. Efficient Transformation of Certain Singular Polynomial Matrix Eigenvalue Problems	305
B. NICLOT, P. DEGOND, AND F. POUPAUD. Deterministic Particle Simulations of the Boltzmann Transport Equation of Semiconductors	313
Q. ZOU, E. A. OVERMAN II, H.-M. WU, AND N. J. ZABUSKY. Contour Dynamics for the Euler Equations: Curvature Controlled Initial Node Placement and Accuracy	350
NEIL M. WIGLEY. An Efficient Method for Subtracting off Singularities at Corners for Laplace's Equation	369
R. B. KINNEY, M. E. TASLIM, AND S. C. HUNG. A Hybrid Computational Approach to Multiple-Body Viscous-Flow Problems: Application to Large-Eddy Breakup in a Boundary Layer	378
L. L. BOYER AND G. S. PAWLEY. Molecular Dynamics of Clusters of Particles Interacting with Pairwise Forces Using a Massively Parallel Computer	405
WILHELM HEINRICHS. Multigrid Methods for Combined Finite Difference and Fourier Problems	424
J. J. GOTTLIEB AND C. P. T. GROTH. Assessment of Riemann Solvers for Unsteady One-Dimensional Inviscid Flows for Perfect Gases	437
EDWARD LARSEN. A Grey Transport Acceleration Method for Time-Dependent Radiative Transfer Problems	459
P. V. A. YIDANA AND K. HARTT. The Formation of a Rational S Matrix Using Phase Shifts from Elastic Scattering	481
C. G. CONSTABLE AND R. L. PARKER. Smoothing, Splines and Smoothing Splines: Their Application in Geomagnetism	493
LIST OF FORTHCOMING ARTICLES	509
AUTHOR INDEX FOR VOLUME 78	510

Journal of Computational Physics

INFORMATION FOR AUTHORS

The purpose of the *Journal of Computational Physics* is to publish articles concerning techniques developed in the solution of data handling problems and mathematical equations, both arising in the description of physical phenomena.

Manuscripts should be submitted to: The Editors, *Journal of Computational Physics*, University of California, Lawrence Livermore National Laboratory, P. O. Box 5509, L-561, Livermore, California 94550, U.S.A.

Only original papers will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editors' discretion. Articles and any other material published in the *Journal of Computational Physics* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be typewritten with wide margins on high quality 8.5 × 11-in. bond paper, using double spacing throughout. If larger paper must be used, the text must still be within these dimensions. A minimum of three copies should be submitted; however, in order to expedite handling of manuscripts, five copies are desirable. The original of the manuscript and figures (including computer-generated data) need not be submitted until acceptance, as long as the copies are clear and reproducible. Figures and tables must be in all copies.

Each page of the manuscript should be numbered consecutively. Page 1 should contain the article title, author, and coauthor names with complete affiliation(s). At the bottom of this page should appear the subject classifications and key words (see below). Page 2 should contain a proposed running head of less than thirty-five characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent. Page 3 of full articles should contain a short abstract.

Notes. Short notes of 10 pages or less (including figures, tables, and references but excluding title pages) regarding the availability of interesting and useful new programs or tabular material will be considered for publication. Letters to the Editor commenting on articles already published in this Journal will also be considered. Neither notes nor letters should have an abstract.

With the exceptions noted below, authors should be guided by the *Style Manual*, 1978, of the American Institute of Physics.

Subject Classification. Authors are required to classify their own manuscripts using the 1980 *Mathematics Subject Classification*, reprinted from the 1978 *Mathematical Reviews Index*, pp. S27-S34, with the additional classifications listed in the January 1, 1981 issue. Authors are requested to choose at least two categories—one in numerical analysis category 65, and one other (generally a physical classification) from the categories beyond 65.

List of Symbols. If the paper is accepted for publication, it is of vital importance that the author submit a complete list of symbols. The symbols used should be identified for the typesetter **phonetically**. This list will not appear in print but is essential to avoid costly corrections in proof. The author may prepare his or her own list or use a preprinted form supplied by the Editors.

Tables. Number tables consecutively with Roman numerals. Extensive tables will be reproduced photographically and should be typed carefully in the **exact** format desired. Authors will be charged for any new photoreproductions necessitated by changes in proof. Use superscript lowercase italic letters for table footnotes, which should be typed immediately below the table. Type tables at least double-spaced, including titles and footnotes. Do not underline table titles; reserve underlining for text that is to be italicized.

Equations. Equations should be typewritten whenever possible and the number placed in parentheses at the right margin. Reference to equations should use the form "Eq. (3)" or simply "(3)." Superscripts and subscripts should be typed or handwritten clearly above and below the line, respectively. Use the exponent $^{1/2}$ whenever possible.

References. References should be cited in the text by a number in square brackets. Literature cited should appear on a separate page at the end of the article and should be styled and punctuated according to the standards of the American Physical Society and using standard abbreviations for journals (see *Chemical Abstracts Service Source Index*, 1985). See the following examples:

1. D. SCHNACK AND J. KILLEEN, *J. Comput. Phys.* **35**, 110 (1980).
2. I. GOHBERG, P. LANCASTER, AND L. RODMAN, *Matrix Polynomials* (Academic Press, New York, 1982), p. 54.
3. R. GROSS, M. KOYANAGI, H. SEIFERT, AND R. P. HUEBENER, in *Proceedings, 17th Int. Conf. on Low Temperature Physics, Karlsruhe, West Germany, 1984*, edited by U. Eckern et al. (North-Holland, Amsterdam, 1984), p. 431.

For unpublished lectures or symposia, include title of paper, name of sponsoring society in full, and date. Abbreviation of DOE Laboratory report names should follow the style of *Nuclear Science Abstracts*. Give titles of unpublished reports with "(unpublished)" following the reference. Further examples and instructions are available from the Editors.

Footnotes. Footnotes in the text should be avoided if at all possible. If they must be used, identify by superscript numbers and type together on a separate page, double-spaced.

Figures. All illustrations are to be considered as figures. Number each graph or drawing in sequence with Arabic numerals. Supply a descriptive legend for each figure. Type legends double-spaced consecutively on a separate page.

Plan figures to fit the proportion of the printed page. Use a professional lettering set on the original so that the letters and numbers are large enough and "open" enough to take a reduction of 50 to 60% without filling in the ink. Do not include background grids; however, on paper with blue lines the grid can be eliminated in the process of photoreproduction. Identify each figure in a margin with the name of the journal, author's name, and figure numbers; avoid marking the backs of figures.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased.

ADVANCES IN APPLIED MATHEMATICS

EDITOR
Gian-Carlo Rota

Massachusetts Institute of Technology, Cambridge

Original and Expository Articles on All
Aspects of Applied Mathematics, Including:

- Communication theory
- Computer science
- Continuum mechanics
- Mathematical biology
- Mathematical economics
- Mathematical physics
- Statistics

Advances in Applied Mathematics emphasizes papers that represent a substantial advance in their field. The journal is an excellent source of current information for mathematicians, applied mathematicians, physicists, statisticians, economists, computer scientists, and biologists.

Journal Promotion Dept., 1250 Sixth Avenue
San Diego, CA 92101, U.S.A. (619) 230-1840

Please enter my subscription for:

☐ **Advances in Applied Mathematics**

Volume 9 (1988), 4 issues ISSN 0196-8858

In the U.S.A. and Canada: \$105.00

All other countries: \$126.00

Please send me:

- ☐ A sample copy.
- ☐ Privileged personal rate information. Personal subscription rates are available only on orders placed directly with the Publisher and paid for with personal funds. Checks and money orders must be drawn against a U.S. bank.

Method of payment:

- ☐ Our purchase order is enclosed.
- ☐ My check is enclosed.
- ☐ Credit information is given.
- ☐ Enter as a Standing Order (institutions only) hereby authorizing Academic Press to service and bill our account each calendar year until cancelled.

Please note: Payment or credit card information must accompany order. Prices include postage, handling, and air freight where applicable, and are subject to change without notice. Payment must be in U.S. currency, U.S. Bank Draft, International Money Order, or UNESCO coupons.

New Atomic and Molecular Titles

THE LATEST VOLUMES OF...

Advances in Atomic and Molecular Physics

Volumes 23 and 24

edited by

Sir David Bates

*The Queen's University of Belfast,
Northern Ireland*

Benjamin Bederson

New York University, New York

Volume 24

CONTENTS: D. Smith and N.G. Adams, The Selected Ion Flow Tube (SIFT): Studies of Ion-Neutral Reactions. M.A. Morrison, Near Threshold Electron-Molecule Scattering. S.J. Smith and G. Leuchs, Angular Correlation in Multiphoton Ionization of Atoms. R.J. Knize, Z. Wu, and W. Happer, Optical Pumping and Spin Exchange in Gas Cells. A. Crowe, Correlations in Electron-Atom Scattering.

1988, 338 pages, \$94.50

ISBN: 0-12-003824-2

Volume 23

CONTENTS: C.R. Vidal, Vacuum Ultraviolet Laser Spectroscopy of Small Molecules. I.P. Grant and H.M. Quiney, Foundations of the Relativistic Theory of Atomic and Molecular Structure. D.E. Williams and J.-M. Yan, Point-Charge Models for Molecules Derived from Least-Squares Fitting of the Electric Potential. J. Bauche, C. Bauche-Arnoult, and M. Klapisch, Transition Arrays in the Spectra of Ionized Atoms. F.J. Wuilleumier, D.L. Ederer, and J.L. Picque, Photoionization and Collisional Ionization of Laser Excited Atoms Using Synchrotron Radiation.

1988, 300 pages, \$84.50

ISBN: 0-12-003823-4

Phase Transitions and Critical Phenomena

Volume 12

edited by

Cyril Domb

Bar-Ilan University, Ramat-Gaa, Israel

Joel Lebowitz

*Rutgers University, New Brunswick,
New Jersey*

CONTENTS: S. Dietrich, Wetting Phenomena. M. den Nijs, The Domain Wall Theory of Two Dimensional Commensurate-Incommensurate Phase Transitions. P. Meakin, Fractal Aggregates and Their Fractal Measures. Index.

1988, 516 pages, \$98.50

ISBN: 0-12-220312-7

Optics of Charged Particles

Hermann Wollnik

*Justus Liebig-Universität,
Giessen, Federal Republic of Germany*

CONTENTS: Gaussian Optics and Transfer Matrices. General Relations for the Motion of Charged Particles in Electromagnetic Fields. Quadrupole Lenses. Sector Field Lenses. Charged Particle Beams and Phase Space. Particle Beams in Periodic Structures. Fringing Fields. Image Aberrations. Design of Particle Spectrometers and Beam Guide Lines. Index.

1987, 291 pages, \$60.00

ISBN: 0-12-762130-X

Quantum Scattering and Spectral Theory

D.B. Pearson

University of Hull, England

CONTENTS: Introduction. Mathematical Foundation. Time-Dependent Scattering Theory—First Steps. The Structure of Wave Operators. The Free Hamiltonian and Its Perturbations. The Schrödinger Operator. Spectral Analysis of the Schrödinger Operator. Scattering by Central Potentials. Scattering in Three Space Dimensions. Localisation. The Trace Method in Scattering Theory. Asymptotic Completeness and the Generator of Dilations. Bound States and Scattering States. Scattering Theory in Context. Index.

1988, 512 pages, \$98.00

ISBN: 0-12-548260-4

The Single-Particle Density in Physics and Chemistry

edited by

N.H. March

University of Oxford, England

B.M. Deb

Panjab University, Chandigarh, India

1987, 400 pages, \$75.00
